ABSTRACT

California law requires that the reading performance of children in selected grades throughout the state be tested. Since wide variations exist among California school districts in geographical, social, financial, and many other conditions, information related to many of these conditions in which pupils are learning to read is reported, thus placing the test scores for reading and academic aptitude (IQ) in a meaningful context. In Part I, test scores and other factors are ranked for each school district in the state without regard to type of district organization, size, or academic aptitude of pupils. In Part II, school districts are divided into 76 groups according to type of district organization, size, and median IQ score. Indices of family poverty, percentage of minority enrollments, total general fund tax rates, indices of minimum and maximum salaries paid to teachers, pupil-teacher ratios, and other information are given for each district. This annual report is seen as a factor contributing to the strengthening of California's public school system. (CK)

FOREWORD

Since the beginning of statewide testing programs in California in 1962, an annual report of the testing results has been prepared by the State Department of Education. The purpose of the annual report is to make available to citizens and educators information about pupil achievement to be used in strengthening California's public school system. This year's report includes, for the first time, educational, social, and financial data for each school district.

The report provides information that the State Board of Education may find useful in making decisions about statewide educational program priorities and that the Legislature may find useful in making decisions about allocation of available state resources. It also provides information that may be helpful to school districts in strengthening existing curriculum and in making decisions about the development of new programs for children.

Max Rafferty

Superintendent of Public Instruction

PREFACE

The development of reading skills is one of the basic aims of public education in California, and laws have been enacted that require testing of the reading performance of children in grades one, two, three, six, and ten. These laws also require that the reading test scores obtained be reported to school districts, the State Board of Education, and the State Legislature. This report complies with that legal requirement.

There are wide variations among California school districts in geographical, social, financial, and many other conditions. Therefore, information related to many of the various conditions in which pupils are learning to read and are being tested has also been included in the report in an effort to place test scores in a meaningful context.

Introduction

Reading and academic aptitude test scores, along with data on a variety of factors, are presented in this report for each school district in California. Each score and factor is presented as a reported or computed figure and also as a numerical rank for the school district with which it is associated. The ranking of the scores and factors follows the same format for the state as a whole and within each of the groups of school districts listed in Table II. The meaning of the rank numbers for each score and factor is as follows:

Type of score or factor	Meaning of rank number*	
	Number "1"	Large numbers
Reading test	High median score	Low median score
IQ test	High median IQ	Low median IQ
Index of family poverty	High family income	Low family income
Percent of minority enrollment	Low percent of minority pupils	High percent of minority pupils
Transitory factor	Transfer of few pupils to other schools and/or districts	Transfer of many pupils to other schools and/or districts
Assessed valuation per unit of a.d.a.	High assessed valuation per pupil	Low assessed valuation per pupil
Expenditures for instruction per unit of a.d.a.	High expenditures per pupil	Low expenditures per pupil

Average class size	Small classes	Large classes
Certificated non-teaching personnel per 100 teachers	Few	Many

*The words "high," "low," "few," and "many" are used here to express only the relative position of a school district with respect to all other school districts.

The sources of the data presented and the computations involved for each factor are described in Appendix A.

The report has been divided into two parts. In the first part, all school districts in the state are listed alphabetically within counties. In the second part, the districts have been divided into groups to make comparisons of information meaningful.

Part I of the Report

In Part I of the report, the test scores and other factors for each school district in the state are in rank order without regard to type of district organization, size, or academic aptitude of pupils. District names and data are shown in Table I-1. Because some of the test scores and data computed for other factors were the same for several districts, the same rank was assigned to all districts that had the same figure with respect to any given test score or factor. The number of school districts that had the same test scores, or the same figures or indices for other factors, varied from test to test and from factor to factor. The number of possible ranks within any given factor depended upon the number of districts that had the same score or figure for that factor instead of upon the total number of districts in the state. The number of possible ranks for any factor will be less than the total number of school districts. The result is that the number of possible rankings is different for each factor. This variability in the number of districts that had the same figures or indices for given factors is demonstrated in Table I-1, page 6, where there were 32 different ranks for "average transitory factor, grades 9-12" and 1,076 different ranks for "assessed valuation per unit of a.d.a."

In Table I-1 the possible number of ranks for each score and factor is presented in the horizontal column labeled "maximum possible rank." The maximum possible rank at the top of each column provides the reader with an immediate statewide reference point. For example, the median reading test raw score rank for Alameda City Unified School District was 116 out of a statewide total of 301 possible ranks (see Table I-1, page 6).

At the far right of Table I-1, beyond the double vertical rules, are the median reading test raw scores for grades

one, two, and three for each school district. These scores have not been put in rank order. To the right of the median reading test raw scores are the statewide ranks for average class size and average transitory factor for grades one through three as well as the actual figures in each of these categories for each district. Information about grades one through three has been presented so that the reader may make reference to the largest amount of available information regarding test scores and other factors for each district.

With the exception of the data in the column headed "regular a.d.a." and the data for grades one, two, and three, all figures in Table I-1 show only the position or rank of each school district in relation to all other districts in the state. Median test scores and actual data for each of the other factors are presented for each district in Part II of this document. Immediately to the right of the district name in Table I-1 is a column headed "Part II table number," which should be used to identify the table in Part II where the actual data for a particular district may be found.

Part II of the Report

In Part II of the report, school districts have been divided into 76 groups according to type of district organization, size, and median academic aptitude test score. The groupings provide an opportunity to view the test scores and other factors in each school district in relationship to those in districts that are of generally similar organization, size, and IQ range.

School districts have been placed into groups according to the following procedures:

1. All districts were divided into three groups according to type of organization: unified, elementary, and high school.
2. Each of the three organizational groups was further divided into five groups according to size, as determined by 1968-69 regular average daily attendance. The size

groups within each organizational type group are the following:

a. Unified school districts with average daily attendance of:

    25,000 and over
    10,000 to 24,999
    1,000 to 9,999
    300 to 999
    299 and under

b. Elementary school districts with average daily attendance of:

    10,000 and over
    4,000 to 9,999
    1,000 to 3,999
    200 to 999
    199 and under

c. High school districts with average daily attendance of:

    10,000 and over
    6,000 to 9,999
    2,000 to 5,999
    600 to 1,999
    599 and under

3. Each of the 15 size groups was further divided into five groups according to IQ range for grades six and ten, as appropriate. Unified school districts will appear in IQ

in IQ range groups for both grade six and grade ten. The IQ range groups are the following:

110.5 and over
102.5 to 110.4
94.5 to 102.4
86.5 to 94.4
Under 86.5

Some examples of the final groups resulting from these breakdowns are all unified school districts with between 4,000 and 9,999 a.d.a. that have a median sixth grade IQ of between 95 and 102; all unified school districts with between 4,000 and 9,999 a.d.a. that have a median tenth grade IQ of between 103 and 110; all elementary districts with between 1,000 and 3,999 a.d.a. that have a median IQ of between 95 and 102; and all high school districts with an a.d.a. of 599 and under that have a median IQ of over 110.

All districts that fit within a given group according to type of organization, size, and IQ range are listed in rank order by reading test median raw score within that group. The rank order within the group with respect to each of the other factors is also given. The figures that served as bases for the rankings are placed to the right of the group rank. For reading and IQ only, the statewide rank of the district is presented immediately to the right of the group rank and is followed by median test scores. The placement of both ranks together provides the reader with a statewide reference to all school districts in addition to a reference to districts of similar organization, size, and median academic aptitude scores.

APPENDIX A

Explanation of Factor

Reading test median raw scores are reported for the following tests:

Grade 1 Stanford Reading Test -- Primary I Level, Form W
Grade 2 Stanford Reading Test -- Primary II Level, Form W
Grade 3 Stanford Reading Test -- Primary II Level, Form X
Grade 6 Stanford Reading Test -- Intermediate II Level, Form W
Grade 10 Reading Section, Tests of Academic Progress, Form 1

Median IQ Scores

The median IQ scores are based on the Lorge-Thorndike Intelligence Tests -- Verbal Battery, which was administered to pupils in grades six and ten during October, 1968. This test, published by Houghton Mifflin Company, yields IQs ranging from 50 to 151 for grade six (Form 1, Level D) and from 50 to 150 for grade ten (Form 1, Level G). The median IQ score computed to one decimal place was used as the measure of average scholastic ability for each school district.

Index of Family Poverty

The index of family poverty was derived by dividing funds allotted to a school district under Title I of the Elementary and Secondary Act of 1965 (Public Law 89-10) by the average daily attendance in the district.

Since the 1968-69 expenditure figures were not available for all school districts at the time this report was being prepared, the amount of money each district was entitled to receive under Title I of ESEA was used to calculate the index

of family

t was being pre-
s entitled to
lculate the index

of family poverty. The total district entitlement figure was divided by the average daily attendance, excluding adult enrollment, for the 1968-69 fiscal year.

The index of family poverty, as calculated from the ESEA, Title I, entitlement rather than from expenditures, had the advantage of not being affected by districts that did not submit ESEA, Title I, projects or that submitted projects for less than their entitlement or that spent less than the amount approved on a project. It provided a computational basis for determining poverty conditions of a school district without being influenced by the actions of the district.

Percent of Minority Enrollment

The percent of minority enrollment in this report is the percent of the total enrollment of the school district, which is comprised of pupils from all minority groups. This information is collected annually by the Division of Compensatory Education of the State Department of Education on Form OS/CR entitled "School Report of Racial and Ethnic Distribution of Pupils." The figures apply to the 1967-68 school year. The percent is computed to one decimal place.

Average Transitory Factor

The average transitory factors were derived by dividing the average daily attendance of the school district by the total annual enrollment of the district.

Three transitory factors have been computed for school districts. The factors are based upon the regular day class average daily attendance and total annual enrollment for the three grade level groups -- one through three, four through eight, and nine through twelve. These data are collected on the Annual Report of Attendance forms: J-18A for elementary grades; J-19EA for grades seven and eight; and J-19A for grades nine through twelve. The transitory factor for each grade level group is the result of dividing the a.d.a. by the total enrollment. The total annual enrollment was defined as the count of pupils entered on the roll for regular classes during the course of the 1968-69 school year. Pupils changing schools within the district were counted each time they enrolled in a school.

Assessed Valuation per Unit of Average Daily Attendance

To compute the assessed valuation per unit of average daily attendance, the 1968-69 modified assessed valuation for each school district was divided by the 1968-69 total regular average daily attendance in grades one through twelve. This factor was calculated to the nearest cent.

The regular a.d.a. was used in the calculation because it is a figure that is derived from sources common to all school districts. The total a.d.a. was not used because of the wide variation among districts in the operation of summer schools, continuation schools, and adult classes.

Expenditures for Instruction

Expenditures for instruction per unit of a.d.a. were computed by dividing the expenditures of each school district (item 200, total instruction, on Form J-41) by the fiscal a.d.a. for that district. The factor was rounded to the nearest cent.

Total General Purpose Tax Rate

The total general purpose tax rate was taken from information collected from each school district on Form J-29B and summarized by the Bureau of Administrative Research and District Organization of the State Department of Education. It includes the areawide tax when levied. In the few cases in

e few cases in

which a school district reported permissive override tax rates but was not levying a general purpose tax at the legal tax rate limit, the permissive override tax rates were considered part of the general purpose tax rate to the extent of the legal tax rate limit.

Total General Fund Tax Rate

The total General Fund tax rate was taken from information collected on Form J-29B from each school district and summarized by the Bureau of Administrative Research and District Organization. It is the sum of the general purpose tax rate and the permissive override tax rates. The following special tax rates for capital outlay and other special purposes have been omitted from this calculation: annual repayment of state loans, State School Building Loan Fund, bond interest and principal payment, children's center fund, development center fund, and annual charge for use of property.

Index of Maximum and Minimum Salaries Paid to Teachers

The index of maximum and minimum salaries paid to teachers was derived from information collected from each school district on Form R-1 by the Bureau of Administrative Research and District Organization. This form is a frequency distribution of salaries actually paid to teachers with a lower interval of under $5,000 and a top interval of $14,000 and over. Each interval has a range of $150.

The index of maximum and minimum salaries paid to teachers was computed for each district by adding the upper limit of the interval containing the minimum salary paid and the lower limit of the interval containing maximum salary paid and dividing the sum by two. In Part II of this report, the high and low intervals are listed as maximum and minimum salaries paid, and the rank number is for the index or midpoint.

For school districts that operate junior colleges, only salaries paid to teachers of kindergarten through grade twelve were included in this report.

Average Class Size, Grades One through Three

Information on average class size in grades one through three is collected annually on Form J-7 by the Bureau of School Apportionments and Reports of the State Department of Education. The average number of pupils per class is rounded to two decimal places. School districts with less than 101 units of average daily attendance were not required to complete Form J-7.

Pupil-Teacher Ratio, Grades Four through Eight

Information on pupil-teacher ratio in grades four through eight is collected annually by the Bureau of School Apportionments and Reports on Form J-7. The average number of pupils enrolled per full-time equivalent classroom teacher in the school district was computed to one decimal place. Districts with less than 101 units of average daily attendance were not required to complete Form J-7.

Number of Certificated Nonteaching Personnel

The number of certificated nonteaching personnel per 100 full-time teachers was taken from the biennial report produced by the Bureau of Administrative Research and District Organization entitled "Ratio of California Public School Nonteaching Employees to Classroom Teachers as of April 1, 1968." Ratio B, certificated nonteaching employees divided by the number of full-time classroom teachers in the regular educational program of the district, excluding adult education, was used in this report. This information was not collected from elementary school districts with less than 101 units of average daily attendance or from high school districts with less than 301 units of average daily attendance. Common administration districts were asked to supply two ratios for this report, one for grades one through eight and one for grades nine through twelve. The ratio is computed to one decimal place.
